Introduction to Argos X

Argos X is a new version of the Argos Web Viewer, offering a modern and intuitive interface to help you navigate and work more efficiently. It includes the same features as the web viewer and offers a few new capabilities.

Basic Navigation

Menu Navigation

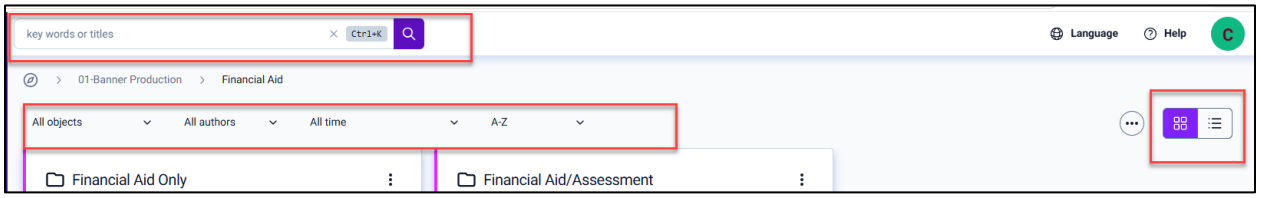

Expand or collapse the menu navigation to view your Shortcuts, Recents, Home Folder, and Folder lists.

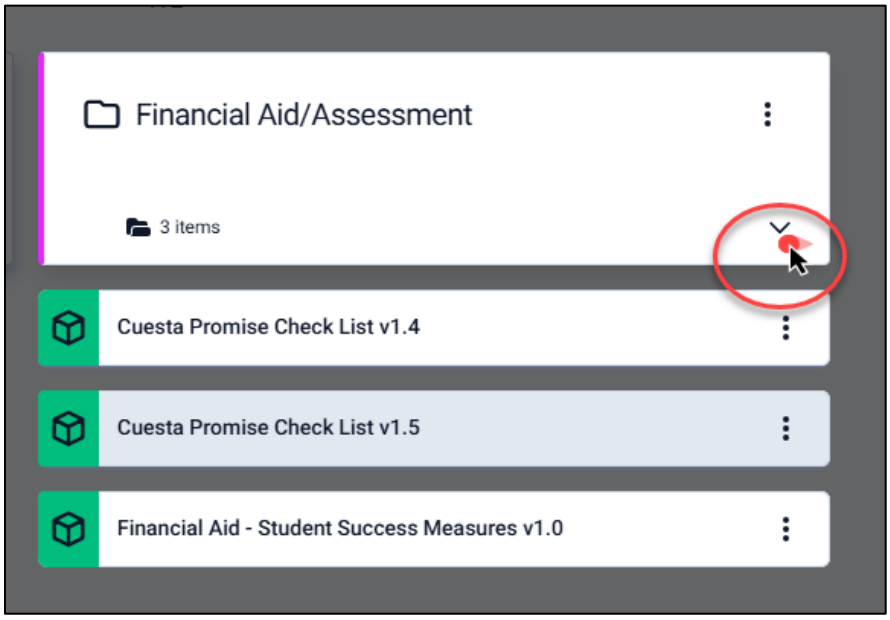

- Update your Home folder by selecting the ellipse and choosing Change Home Folder.

Locating Folders, Data Blocks, and Reports

- Use the Search option at the top of the window to enter keywords or titles
- Use the filters to narrow the results of the displayed items
- Use the view options to change from block view to list view

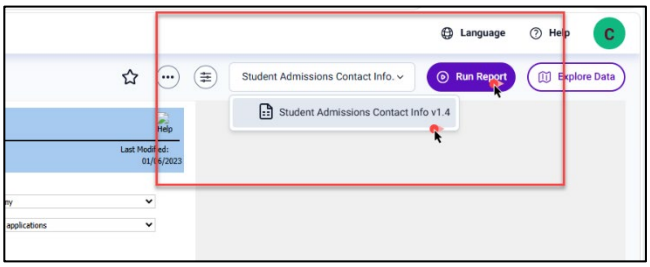

- Use the peek option to easily view all folders/data blocks in a folder

Working with Dashboards, Data Blocks, and Reports

Run a Report

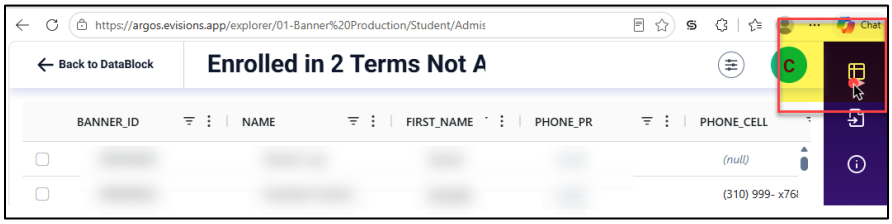

When opening a dashboard, you will see the same layout you are familiar with from Argos Web Viewer. Each dashboard will have one or more reports associated and unique filters.

- Run a report by selecting from the drop-down menu and choose Run Report. Argos X does allow you to continue to navigate while the report processes and your browser will notify you when it is ready for downloading.

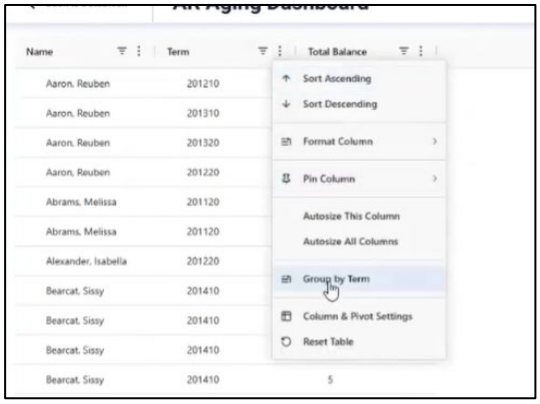

Explore Data

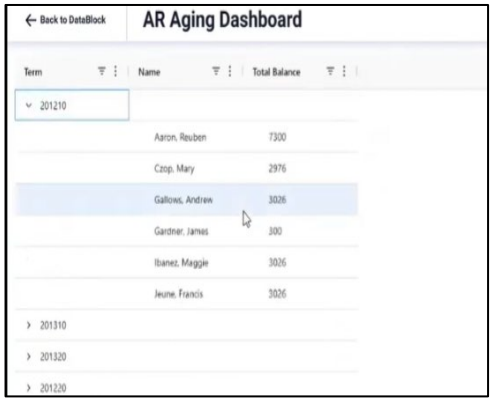

Filter, group, sort, rearrange and export data by use of the Explore Data feature.

- Use the Column & Pivot Settings options to edit and rearrange columns displayed.

- Use the column filter options to narrow down results based on values of a column. For example, use the Group by Term option to easily compare results by term.

- After manipulating the data, you can export the results, as needed.
