Common Tags in Adobe Acrobat

Element	Associated Adobe Tag Codes	Use/Description																															
Description																																	
Title or Subtitle	<h1>, <h2>, <h3>, <h4>, <h5>, <h6></h6></h5></h4></h3></h2></h1>	Use <h#> tags for text that is a title of a</h#>																															
		document or title of a subsection of the																															
		document.																															
Text/paragraphs		Use the tag for text and paragraphs																															
		that are the body of the document and																															
		are not a title or subsection.																															
Table of	<toc>, <toci>;</toci></toc>	Use <toc> to identify if there is a Table of</toc>																															
Contents	<reference>, <link/></reference>	Contents.																															
		Use <toci> for every item listed in the</toci>																															
		Tale of Contents.																															
		As with Lists, if there is a sub list of items																															
		you will need a <toc> tag for every level</toc>																															
		with nested <toci> tags.</toci>																															
		If the Table of contents is linked, you will																															
		need to ensure the <toci> tag has a</toci>																															
		<reference> tag containing a <link/> tag.</reference>																															
Lists	<l>, </l>	Use <l> as the parent tag for the List.</l>																															
		Use as the child tag for every item in																															
		the list.																															
		Each new sub list will need a new <l> tag</l>																															
		at the new level with nested tags.																															
Links	<link/> , Link- OBJR	Use <link/> for all links in the document.																															
		The Link-OBJR will contain the hyperlink																															
		information.																															
Tables	<table>, <tr>, <th>, <td></td></th><th>Use <table> to identify tables.</table></th></tr><tr><th></th><th></th><th>Use <tr> to identify each row of the</tr></th></tr><tr><th></th><th></th><th>document.</th></tr><tr><th></th><th></th><th>Use <th> to identify headers in rows</th></th></tr><tr><th></th><th></th><th>and/or columns.</th></tr><tr><th></th><th></th><th>Use <td> to identify the content in each</td></th></tr><tr><th></th><th></th><th>part of the table (content that is not a</th></tr><tr><th></th><th></th><th>header).</th></tr><tr><th>Image</th><th><figure></figure></th><th>Use <figure> to identify images in the</figure></th></tr><tr><th></th><th></th><th>document.</th></tr></table>	, <td></td>		Use <table> to identify tables.</table>			Use <tr> to identify each row of the</tr>			document.			Use <th> to identify headers in rows</th>	to identify headers in rows			and/or columns.			Use <td> to identify the content in each</td>	to identify the content in each			part of the table (content that is not a			header).	Image	<figure></figure>	Use <figure> to identify images in the</figure>			document.
, <td></td>		Use <table> to identify tables.</table>																															
		Use <tr> to identify each row of the</tr>																															
		document.																															
		Use <th> to identify headers in rows</th>	to identify headers in rows																														
		and/or columns.																															
		Use <td> to identify the content in each</td>	to identify the content in each																														
		part of the table (content that is not a																															
		header).																															
Image	<figure></figure>	Use <figure> to identify images in the</figure>																															
		document.
