Determine Internet Explorer Version

1. Do one of the following:

<table>
<thead>
<tr>
<th>No Menu Bar</th>
<th>Menu Bar</th>
</tr>
</thead>
<tbody>
<tr>
<td>Click the <strong>Gear</strong> icon.</td>
<td><strong>Help</strong> menu.</td>
</tr>
</tbody>
</table>

**Newer versions of Internet Explorer have done away with the menu bar, replaced by the Gear icon in the upper-right corner of the window.**

**Older versions of Internet Explorer use a traditional menu system by default, accessed by clicking the Help menu.**

**NOTE:** If you have neither a Gear icon nor a menu bar, right-click the blank space in your bookmarks bar and select “Menu Bar” from the shortcut menu. Follow the “Menu Bar” step above.

2. Click **About Internet Explorer**.
   *This is located at the bottom of the menu. A new window will appear.*
3. Find your version number.

   The logo will display the general version number you are using (e.g. “Internet Explorer 11”). Your exact version will be listed directly beneath the Internet Explorer logo. The longer numbers denote which specific build of the general version you are using.

**NOTE:** Different operating systems support different versions of Internet Explorer (IE):

- The latest available version for Windows XP is IE8
- The latest available version for Windows Vista is IE9
- The latest available version for Windows 7 & 8 is IE11
