Embed YouTube Videos in PowerPoint 2007

Adding a YouTube video to a PowerPoint 2007 presentation can be a little tricky if you’re not familiar with the process. Fortunately if you follow this step-by-step guide, you should have no problems!

Accessing the Developer Tab

Before you can embed a YouTube video into a PowerPoint 2007 presentation, you'll need to have access to the Developer tab. If the Developer tab does not appear above PowerPoint’s ribbon, follow these steps to activate it:

1. Click the Office button.
2. Click PowerPoint Options at the bottom of the menu.
3. In the Popular category check the box for Show Developer tab in the Ribbon.
4. Click OK.

*The Developer tab will appear above the PowerPoint ribbon.*

Embedding YouTube Videos

1. Locate the video in YouTube and copy the URL.
   *Example: http://www.youtube.com/watch?v=oAVjF_7ensg*
2. Open PowerPoint, and on the Developer tab (in the Controls group) click More Controls.

3. Select Shockwave Flash Object and then click OK.
4. Click and drag a box on the PowerPoint slide in which the video will appear.
5. Right-click the box and from the shortcut menu select **Properties**.

6. Paste the URL into the **Movie Property** field.
7. In the URL delete the text "watch?" and change the equal sign (=) to a forward slash (/).
8. Adjust the options for Looping or AutoPlay if desired.
